Experience

Snowflake **Toronto, Canada**
Senior Manager of Product Management *October 2024 - Present*

Lead product for Snowflake's Developer Platform, turning a fragmented, high-risk area into a more coherent and strategically aligned platform that leadership can understand, invest in, and execute against. Created Snowflake's governed SDLC model, combining Database Change Management and Snowflake CLI to deliver full inner- and outer-loop coverage that gives teams and AI agents a deterministic way to develop, test, and safely promote changes on Snowflake. Own Snowflake's mission-critical drivers and interfaces, improving the stability and long-term direction of the connectivity layer that underpins how customers use Snowflake through replatforming, incident leadership, vendor strategy, and critical customer escalations.

GitHub **Toronto, Canada**
Director of Product Management *September 2022 - September 2024*
Staff Product Manager, Open Source *June 2020 - August 2022*

Joined to lead integration of the npm acquisition into GitHub. Became DRI through a period of significant security crises including package takeovers and protestware, driving response across technology, policy, process, and legal. Pioneered mandatory 2FA for highest-impact packages, a model later adopted industry-wide. As Director, expanded scope to Packages and then Codespaces, making Codespaces profitable through architectural improvements. Led the team through early AI disruption, running prototypes and early productization of Copilot Workspaces.

Google **New York City, New York**
Staff Developer Advocate, Open Source Programs Office *March 2020 - June 2020*
Staff Developer Advocate, Google Cloud Platform *October 2019 - March 2020*
Senior Developer Advocate, Google Cloud Platform *April 2018 - September 2019*
Developer Advocate, Google Cloud Platform *January 2017 - March 2018*

Promoted twice in three years. Championed Top-Level Await from proposal through TC39 Stage 4, building consensus across browser vendors over 18 months. Co-founded OpenJS Foundation by chairing merger negotiations between Node.js and JS Foundations. Led the ES Modules working group: 42 participants across 10 corporations and 3 standards bodies. Shipped ES Modules to Node.js, leading the working group and writing core implementation code. Co-authored the update to the JavaScript IETF mimetype specification.

IBM **San Francisco, California**
Advisory Software Engineer, Open Technology *October 2015 - January 2017*

Joined without prior Node.js core experience, quickly ramped to contributor, and by end of tenure was leading the Release and LTS process for the project. Built smoke testing suite still used for every Node.js release.

Open Source and Standards

ECMA International
TC39 Delegate, Co-Chair (2020), ECMA Vice-President (2019-2020) *2017 - 2024*
